

Watch the Bean Take Root

Things you will need:

- Clear glass jar
- Kitchen towel
- Broad bean seed
- Water

Instructions:

Make some kitchen paper damp and place it in the jar. Put a broad bean seed on the kitchen paper. Every couple of days spray a small amount more water on the paper to keep it damp. Watch it grow!

The science behind it:

As the seed begins to grow this is called germination. To germinate a seed requires water, oxygen, light and a good temperature.
